Summary

Full-stack & embedded developer focused on Python automation, IoT pipelines, and modern C/C++ on ESP32 platforms. Delivered production manufacturing pipeline tooling, high-uptime API integrations, and data-driven sensing systems. Interested in backend platform/IoT systems roles.

Professional Experience

System Administrator | HYGP | United States

October 2025 - Present

- Responsible for managing and maintaining the company's IT infrastructure, ensuring optimal performance, security, and reliability across all systems. This role supports manufacturing operations, order processing, and secure data storage, while maintaining network segmentation and overseeing CCTV systems.

Process Automation Engineer | HYGP | United States

December 2024 - October 2025

- Automated apparel image & pattern prep (Python/OpenCV), reducing manual handling.
- Built scripting layer (ExtendScript/Python), cut turnaround from 2 hrs to 12 mins.
- Integrated MySQL + SQLite production datasets enabling traceable batch history and defect tracking.

Lead Programmer | Cherrytech | Japan

November 2024 - September 2025

- Architected serverless financial & crypto data ingestion (AWS Lambda, API Gateway, DynamoDB)
- Implemented Cognito-based auth + scoped API keys improving security.

Innovation Lab Intern | Växjö Linnæus Science Park | Sweden

December 2023 – May 2024

- Engineered ESP32-S3 weather & sky imaging node network.
- Developed Flask + ML pipeline to produce minute-to-minute forecasts (OpenCV, SciPy, Numpy, Numba).
- Produced geospatial visualizations (Folium, Rasterio, Plotly, Jinja, ES6 JS)

Teaching Assistant | LinnéUniversitetet | Sweden

September 2022 – November 2024

- Supported teaching Python, OOP, IoT & systems courses.

Education

Linnaeus University | Växjö, Sweden BSc in Computer Science - Network Security

Technical Skills

- Languages: Python, C/C++, Java, JavaScript, SQL
- Backend & Web: Flask, Django, ExpressJS, NodeJS
- Data & ML: NumPy, Pandas, OpenCV, Scikit-Learn, Matplotlib, PyTorch
- Cloud & Infra: AWS (Lambda, API Gateway, DynamoDB, Cognito), Docker
- Databases: PostgreSQL, MySQL, SQLite, MongoDB, DynamoDB
- Embedded & IoT: ESP32 (S3), MicroPython, ARMv8, FreeRTOS
- Sensor integration Tooling: Git, CI/CD, Vite, Pydantic, Rasterio, Folium

Projects

devinciSpaceBackend | [Here](#)

Flask backend with async GitHub API integration and SQLite behind Nginx. Documented local setup, endpoints, and deployment notes.

LocalCoCaptain | [Here](#)

Local LLM server extension for wearables. Python backend with NumPy/SciPy and voice relay integration. Added logging and configuration docs for stable runs.

skyDeVisionImager | [Here](#)

CV + geospatial pipeline (Flask UI, SQLite, OpenCV/NumPy/Numba/OpenCL).

asyncPyGithub | [Here](#)

Async python wrapper over Github API. Type validation with PydanticV2. Simple request caching and minimal object interfaces.

Wearable Neopixel Matrix | [Here](#)

Programmable WS2812B matrix wearable to display custom animations, including translation pipeline. MicroPython/C++ as well as both ESP32 and RP2X support.

ESP32 Sky-Imaging Weather-Station | [Here](#)

ESP32-S3 sky Imager/Weather Station equipped w/ SHT31-D, BMP390 and OV5640, 3D printed chassis and SSD1306 display for status information.

ESP32Animator | [Here](#)

A small footprint, memory efficient, multicore render system for the ESP32X platform, written with modern C++ practices in mind.
